

POLE SHAFT - The pole shaft is spun from seamless alloy aluminum. On Tenon Mount poles, tenon is 2-3/8" 0. D. $\times 4^{\prime \prime}$ tall high-strength pipe.

HAND HOLE - On listed poles 20 ' and under, standard non-reinforced hand-hole is 2 " $\times 4$ ". For poles with greater EPA rating, reinforced hand hole is available as an option; consult factory. Listed poles 25 ' and above have a 4 " $\times 6$ " reinforced hand-hole as standard. Hand-hole gasket and cover are provided. Hand-hole is located 12 " above pole base on poles with 5 " O.D. bottom and 18 " above pole base on poles with $6 ", 8 "$ or $9 " 0 . D$. bottom (see Pole Selection Chart below). Optional festoon for GFI receptacle (with or without GFI Kit supplied) is available. Minimum height for location of festoon is 18 " above standard hand hole.
BASE - Pole base is cast from 356 alloy aluminum. Completed assembly is heat-treated to a T6 temper. Aluminum nut covers are included with anchor base.

BASE COVERS - Aluminum nut covers are included with anchor base. Optional one-piece round spun aluminum collars are available for poles with 5 ", 6 " or 8 " $0 . D$. bottom (see Pole Selection Chart below). Must be ordered separately.

ANCHOR BOLTS - Set of four anchor bolts conform to ASTM F1554 Grade 55. Each bolt is provided with two hex nuts and two flat washers. Bolts have an "L" bend on one end and are galvanized a minimum of 12 " on the threaded end.

GROUND LUG - Ground lug is standard.
GROUND FAULT CIRCUIT INTERRUPTER - Ground fault circuit interrupter kit is optional. Pole Preparation (festoon) with GFI Kit must be ordered. Specify location in feet above base of pole and side orientation. Minimum height for location of festoon is 18 " above standard hand hole.
FINISHES - Baked-on polyester-powder finish provides one year limited warranty.

## DETERMINING THE LUMINAIRE/POLE COMBINATION FOR YOUR APPLICATION:

- Select luminaire from luminaire ordering information
- Select bracket configuration if required
- Determine EPA value from luminaire/bracket EPA chart
- Select pole height
- $\quad$ Select MPH to match wind speed in the application area (See windspeed map).
- Confirm pole EPA equal to or exceeding value from note above
- Confirm total luminaire/bracket weight does not exceed maximum weight shown in chart below
- Consult factory for special wind load requirements and banner brackets

## FOOTNOTES:

1-Standard pole cap provided.
2 - Pole heights will have +/- 2" tolerance.

| ACCESSORY ORDERING INFORMATION | (Accessories are field installed) |
| :--- | :---: | :---: |
| Description | Order Number |
| 5RSAC - Round 1-Piece Spun Aluminum Collar for RTP w/5" bottom | $505647 C L R$ |
| 6RSAC - Round 1-Piece Spun Aluminum Collar for RTP w/6" bottom | 505648 CLR |
| 8RSAC - Round 1-Piece Spun Aluminum Collar for RTP w/8" bottom | $505649 C L R$ |

Note: Base plate illustrations may change without notice. Do not use for setting anchor bolts. Consult factory for the base plate templates.

## EPA INFORMATION

All poles are guaranteed to meet the EPA requirements listed. Pole manufacturer is not responsible if pole order has a lower EPA rating than the indicated wind-loading zone where the pole will be located. CAUTION: This guarantee does not apply if the pole/bracket/fixture combination is used to support any other items such as flags, pennants, or signs, which would add stress to the pole. Pole manufacturer cannot accept responsibility for harm or damage caused in these situations.

NOTE: Pole calculations include a 1.3 gust factor over steady wind velocity. Example: poles designed to withstand 80 MPH steady wind will withstand gusts to 104 MPH. EPAs are for locations 100 miles away from hurricane ocean lines. Consult LSI for other areas. Note: Hurricane ocean lines are the Atlantic and Gulf of Mexico coastal areas. For applications in Canada and areas using code requirements other then AASHTO LTS-3-94, consult factory

High-Performance Lighting Solutions

[^0]:    EPA based on AASHTO LTS-3-94. For applications in Canada and areas using code requirements other than AASHTO LTS-3-94, consult factory. Designs are limited to top-mounted and side-mount luminaires. Variations from sizes above are available, consult factory. Satisfactory performance of poles is dependent upon the pole being properly attached to a supporting foundation of adequate design.
    Refer to EPA information on next page. Maximum luminaire/bracket weight is shown on the above chart.
    1- Variations from sizes above are available.
    2- Maximum weight of fixtures/brackets to be mounted to pole.
    3- Structure weight is nominal value which includes the pole shaft and base plate.
